REAL-LIFE RUNNING COSTS

MAXIMUM MILEAGE FROM YOUR DATA.

01

WHAT IS SMR3™?

FORECAST RUNNING COSTS FOR SERVICE, MAINTENANCE AND REPAIR.

Covering over 8,000 new cars and light commercial vehicles (up to 7.5 ton).

The **IDS SMR3** application provides a maintenance budget prediction which reflects real-life running costs. One licence gives you access to a comprehensive database of over 8,000 cars and commercials. You can view and export maintenance figures for any term, and mileage up to and including 5 years / 200,000 miles.

Maintenance budget predictions are based on service costs, repair costs, tyre costs and MOTs. The servicing element consists of manufacturers' recommended service schedules, parts prices and labour times.

Repair costs include an allocation for replacement brakes, wiper blades, clutches, exhaust sections, water pumps, starter motors, alternators, batteries and shock absorbers with our own researched prediction of component life.

Tyre costs are based on a premium replacement tyre with prices averaged from a number of different sources. An additional contingency is included for any repairs or balancing that may be required during the life of the tyre.

What's included?

Although we take care to research our own figures for tyre and component life, there may be circumstances where you wish to make alterations to meet the specific requirements of the vehicles you run.

For this reason, we offer full user override facilities, including but not restricted to:

- **Service Intervals (months and mileages)**
- **Tyre replacement mileages**
- **Labour Rates**
- **Contingency (%age, or £ value)**
- **Repair part replacement mileages**
- **Inflation**
- **Parts discount**
- **Tyre discount**
- **Currencies**
- **Winter tyre allocation**

MAINTENANCE BUDGETS BASED ON REAL-LIFE COSTS.

DATABASE ACCESS TO OVER 8,000 CARS & LCVs.

02

BUSINESS BENEFITS

ALL MAINSTREAM MANUFACTURERS ARE COVERED. THE INFORMATION YOU NEED IS AT YOUR FINGERTIPS.

Offering a complete overview of current vehicles; cars and LCVs on the same system – ease of reference.

Weekly updates

Offering you as accurate a picture as you can get.

Easy comparisons

Informing better decisions.

Full user override facilities

Use the data to serve your needs as you define them.

Flexible data export outputs

Pre-set and user-defined export of maintenance budgets in a format that best serves your business needs.

Bespoke development by request

User-defined programming changes can be implemented to SMR3 if required. Changes could include exports not currently catered for, new data fields, new reports and other similar requirements. As an option to the core SMR3 service, bespoke developments incur an additional charge. Please contact us to discuss your needs.

Cost effective

SMR3 is available as an annual subscription for single-user desktop or multi-user server installations.

Customisable

Data override functionality enables you to alter the data to meet your own vehicle monitoring requirements.

WEEKLY UPDATES OFFER AN ACCURATE PICTURE.

CUSTOMISE THE DATA TO MEET YOUR OWN REQUIREMENTS.
